

Landscaping Meter Boxes and Backflow Prevention Devices

Bonita Springs Utilities' meter readers visit your home or facility every month to ensure that your monthly bill is accurate. Please help them do their jobs efficiently by making sure that they can easily reach your meter box. Please observe the following guidelines:

1. Vegetation cannot completely surround the meter boxes and backflow prevention devices.
2. Vegetation shall not hinder access to meter boxes and backflow prevention devices.

Two and one-half feet (30 inches) of clearance should be provided around the meter box and backflow prevention device. The illustration below shows acceptable landscaping plans.

We realize that this equipment may not be attractive, but it is necessary for your safety. We - and BSU meter-reading staff- thank you for your help.
